

IN THE SPECIFICATION:

Please amend page 9, second paragraph, as follows:

B¹

As shown, a firewall is initially executed on a local computer in operation 3021. As mentioned earlier, such firewall may include a software application installed directly on the computer in the form of a personal firewall. Of course, other traditional approaches (i.e. a separate hardware device coupled between the computer and a network) may also be employed.

Please amend page 11, second full paragraph, as follows:

B²

Additional features may also be provided. For example, the various lists of traffic events under each category 402 may be collapsed and expanded as desired by selecting icons 410. By this feature, a user may focus on a category of interest. As a further option, the event log 400 may be archived upon the selection of an archive icon 412. Still yet, an archived event log 400 may be access via a view archived log icon 414. The present event log 400 may even be cleared using a clear event log icon 4186. A test icon 418 is also provided.

Please amend page 13, second paragraph, as follows:

B³

As shown, the present view 600 illustrates a geographical map where the various network segments are located, over which the selected traffic event traversed. For example, the geographical map view 600 may show a plurality of network segments 6012 and the cities, states, and even countries that were traversed.
